

PROTECT YOUR GOLFERS FROM INJURY!

ABOUT OUR PRODUCTS

Designed by Physical Therapist, Certified Hand Therapist, Rita Terris, P.T., C.H.T., **Terris Golf®** golf gloves are the world's first golf gloves designed to protect the golfer from injury. Manufactured from only the finest leathers and incorporating Akton® polymer technology, Terris Golf® gloves greatly reduce shock and vibration, and improve proprioception (hand to brain/brain to hand communication).

All **Terris Golf®** gloves are designed to protect golfers of all ages from injury without restriction of motion of the digits or wrist during the golf swing. **Terris Golf®** gloves are effective in preventing the exacerbation of pre-existing conditions for the already injured athlete, as well as reducing the risk of development of additional problems. For the yet uninjured or younger player: **PROTECTION FACILITATES PREVENTION!**

Each design has been developed to address specific injuries seen in the golfer. The placement of pads in the **Terris Golf® "Competition Series I"**, the **"Training Edition"** and the placement of the additional leathers at the thumb in the **"Competition Series II"** have been designed in response to the years of testing and feedback collected from some of the world's best professional golfers and by the injured recreational player.

You can more confidently return your patients to the game of golf. Golfers will **FEEL BETTER- PERFORM BETTER- PLAY LONGER!**

Other golf gloves may help the arthritic golfer to hold the club, and we do also. However, only **Terris Golf®** provides shock absorption and thereby pain management. Repetition is inherent in the game of golf. It is the best way to train and improve. Repetitive stress is experienced on the driving range, as well as on the course. Reducing shock and vibration translated from the shaft of the club to the hand upon impact allows the tissues of the hand, wrist, arm and shoulder to better tolerate the repetitious activity.

TERRIS GOLF® "COMPETITION SERIES I"

The Terris Golf® "Competition Series I" golf glove conforms to USGA rules and is designed to provide shock absorption at the end range of lateral wrist motion. The demand for lateral wrist motion during the golf swing is excessive requiring the wrist joint to move through a full range of motion. The ligaments and complex structures of the wrist and thumb that protect the joints are frequently injured by the demands of the golf swing. *The Terris Golf® "Competition Series I"* incorporates Akton® protective pad technology at both the radial and ulnar sides of the wrist, (thumb and small finger sides). The radially positioned pad provides comfort and protection for the thumb as the club weight bears on the thumb during the back-swing and follow-through phases of the golf swing. The ulnarly based pad provides protection during contact of the club head with the ball and the turf. To accommodate golfers with slender wrists, *Terris Golf's®* proprietary patent "**SNAP/TAB WRIST ENCLOSURE SYSTEM™**" secures contact of the pads to either side of the wrist joint. The closure pivots with the natural motion of the wrist.

TERRIS GOLF® "COMPETITION SERIES II"

The Terris Golf® "Competition Series II" golf glove conforms to USGA rules and is designed to protect the base of the thumb during the golf swing. This complex joint is subjected to detrimental forces when the club weight bears against the thumb during the backswing potentially causing injury to the cartilage and ligaments. *The Terris Golf® "Competition Series II"* golf glove will significantly reduce the risk of trauma by providing support to this critical area. The *Terris Golf® "Competition*

Series II" golf glove provides ultimate comfort for the arthritic and/or unstable carpometacarpal joint. Gel pads are not used in the construction of the *Terris Golf® "Competition Series I"*. Designed with consideration to biomechanics, the *Terris Golf® "Competition Series II"* is surely the new benchmark in golf glove technology offering the pinnacle of performance and protection to the golfer at a reasonable price.

TERRIS GOLF® "TRAINING EDITION"

The Terris Golf® "Training Edition" is a **MUST** for any golfer at any age when working at the driving range. Hitting many balls in short periods of time puts great repetitive stress on the body. Detrimental shock and vibration are imposed upon the body when the club head impacts the ball and the turf, and especially on artificial surfaces. The *Terris Golf® "Training Edition"* provides superior shock absorption and vibration dampening to the golfer, allowing the body to better tolerate the risks of this repetitious activity. The *Terris Golf® "Training Edition"* incorporates a viscoelastic polymer pad made of Akton® placed on the inside palmar surface of the glove. The pad reduces the direct trauma to the hand and reduces the shock transmitted to the rest of the body. In addition the *Terris Golf® "Training Edition"* provides the golfer greater contact between the palm of the hand and the shaft of the club. The pad allows the hand to be more contiguous with the shaft of the club and the golfer can "feel more" with their hands. This enhances proprioception and maximizes biomechanical efficiency during the complex integrated motions of the golf swing. Having better proprioception will also assist the golfer to resist the common problem of "over gripping".
